

One of my favorite sounds in the Old Blood Noise Endeavors Beam Splitter, and how to get there!

We also offer 1x2 and 1x2 pigtailed beam-splitter using UV curing alignment method. This method can provide better alignment stability compared to our traditional tip-tilt method. If size is a concern, we ...

Our beam splitters are made from high grade glass material with laser grade surface flatness & surface quality for tighter tolerance on the splitting ratio.

Thorlabs offers a wide range of optical beamsplitters. Our plate beamsplitters have a coated front surface that determines the beam splitting ratio while the back surface is wedged and AR coated in ...

Beamsplitters are optical components used to split input light into two separate parts. Beamsplitters are common components in laser or illumination systems. Beamsplitters are also ideal for fluorescence ...

Optics & optical coatings Guide Beamsplitters selection Guide A beamsplitter is an optic that splits light into 2 directions. The split ratio of light transmittance and reflectance is 1:1 and is called a half mirror. ...

Fiber optic module delivered complete with 1:2 splitter terminated in LC/APC connectors. The modules are inserted in a 1U or 3U panel. The 3U panel may be populated with up to 12 modules, the 1U ...

These thin beam splitters can be inserted into an optical light path without beam shift or chromatic dispersion for any light transmission application. Chrome plate half mirrors are plate beamsplitters ...

Optical components that create two beams by splitting incident light are beamsplitters. Read more about the different types of beamsplitters at Edmund Optics.

With non-polarizing beam splitter coating on hypotenuse face, this series of cube beam splitters provide 50:50 split ratio independently on the input beam polarization.
