

The design of ADSS (All-Dielectric Self-Supporting) fiber optic cable allows it to withstand its own weight and external tension without relying on metal supports, making it especially suitable for installation on ...

While the concentric, self-supporting cable design allows easy, one-step installation using standard hardware and installation methods, the SZ-stranded, loose tube design isolates optical fibers from ...

AFL-ADSS (All-Dielectric Self-Supporting) cable is ideal for installation in distribution as well as transmission environments, even when live-line installations are required.

The cable's light weight allows existing poles to be used without the need for surveys, planning and remedial civil works, thereby facilitating rapid and cost effective aerial fiber optic network deployment.

All Dielectric Self Supporting cable or more commonly referred to as ADSS cable is a type of fiber optic cable that is used in aerial applications. This type of cable does not need a messenger to support it, ...

Designed and manufactured specifically for aerial installation. Reinforced fiberglass with or without sheathing, providing a robust and resistant structure.

All Dielectric Self-Supporting Fiber Optic Cable ADSS is loose tube stranded. The optical cable transmits signals in the form of optical pulses, and uses glass or plexiglass as the network transmission medium.

All-dielectric self-supporting (ADSS) cable is a type of optical fiber cable that is strong enough to support itself between structures without using conductive metal elements.

ADSS cables offer a rapid and economical means for deploying optical fiber cables along existing aerial rights-of-way. They are being deployed by cable television operators, telephone companies, ...

Reliable, self-support cable for overhead installations. Our ADSS fiber optic cable features superior water blocking and easy installation. Discover every cable type and find the best solution for your ...
