

# Andor optical power divider resistant to low temperatures

Andor is a world leader in design and manufacture of high-performance EMCCD, sCMOS and CCD cameras, microscopy systems, spectrographs, and optical cryostats.

? Discover our home-build solutions on our NEW Low-Temperature UV-SWIR Spectroscopy webpage! ? Our workhorse detectors, modular spectrographs, and cryostats enable tailored analysis of...

To assist your measurement and analysis instruments requiring low cryogenic temperatures for your samples, Andor offers a broad range of optical cryostats. Separate solutions are available to be used ...

The super uorescence signals were dispersed by a spectrograph (Shamrock, Andor) and detected by a charge-coupled device (Newton idus, Andor). All measurements were performed at room ...

The MAX5490 is ideal for precision gain-setting applications where tight resistance matching and low temperature drift are necessary. The MAX5490 is available in a space-saving 3-pin ...

If you select TTL Low, the system will cause the output voltage from the iVac to go "low" to open the shutter. If you select TTL High, the system will cause the output voltage from the iVac to go "high"...
