

Beam splitters are devices for splitting a laser beam into two or more beams. There are different types, including polarizing and non-polarizing versions.

They are useful for combining / splitting laser beams of different color.

The design and numerical investigation of a silicon polarization splitter (PS) is proposed using triple-tapered directional couplers (DCs). The proposed device consists of a triple-tapered DC, a triple-bent ...

The proposed structure consists of a triple-tapered DC, a tapered waveguide at cross port, and a triple-bent DC at through port, which gives a high degree of freedom for optimization.

Quick-reference guide for beam splitters -- key equations, type comparison tables, Fresnel reflectance, polarizing designs, and a practical selection workflow. Condensed from the comprehensive guide.

The tapered DC structure has the advantage of being insensitive to variations of the coupling length and the local coupling coefficient, and thus can significantly increase the bandwidth and polarization ...

A beam splitter or beamsplitter is an optical device that splits a beam of light into a transmitted and a reflected beam. It is a crucial part of many optical experimental and measurement systems, such as ...

With the large variety of beamsplitters available, the designer needs to take many factors into consideration. This article and its illustrations will go a long way toward making the correct choice ...

Used for monitoring optical systems, split beams into different wavelengths, polarizations or intensities. Can be applied at its maximum effective area from any incident direction, easy to be applied in ...

Our beam splitters are made from high grade glass material with laser grade surface flatness & surface quality for tighter tolerance on the splitting ratio.

Beamsplitters are generally effective at reflecting s-polarization but they are not as effective at preventing p-polarization from reflecting. This occurs because when s-polarized light hits the ...

The proposed polarization beam splitter is not sensitive to the fabrication error and has large tolerance.
