

"Intelligent feeding" instead of manual feeding routines: The automated feed wagon controlled by WIC handles the weighing, mixing and distribution, providing optimum control of all feeding parameters.

From ultrasound sensors to inductive sensors, the Lely Vector offers reliable techniques that provide a flexible way of navigating the farm. Three powerful magnets are placed under the feeding outlet. As ...

Typically, these systems consist of feed storage units, conveyors, feeding lines, and distribution mechanisms. By programming the system to dispense specific quantities of feed at ...

Automated feeding distribution of up to four different types of feed. The system measures out feed exactly in sophisticated volume dispensers, regardless of the feed type, consistency and size of ...

Feed boxes are positioned in feeding areas to distribute feed to livestock efficiently. Conveyors and augers are used to transport feed from silos to feed boxes or troughs. Smart control units allow for ...

Find your automatic feed distribution unit easily amongst the 95 products from the leading brands (Big Dutchman, IMETEC, tigma, ...) on AgriExpo, the agricultural machinery and equipment specialist for ...

By using the Feeding Robot from GEA, you not only significantly reduce manual labor but also optimize feed distribution and minimize waste from uneaten leftovers.

The Triomatic T20 is ideal for dairy and beef farms that want to issue one basic ration, with the option of various added components for each feeding group, and for small-scale farms who want to feed their ...

Highly flexible and powerful, the DAF offers an alternative to the feeder conveyor. Integrate it into your automated system to facilitate the distribution of TMR, silage and chopped hay.

From nursery to finishing, AP has the equipment and resources to provide you with an efficient and reliable feeding system. Built tough and engineered to reduce feed loss and operating expenses.
