

# Can a beam splitter be used with a surveillance camera

Not only are beamsplitters used across a wide array of consumer tech products (e.g., cameras, projectors, etc.), but they are also useful for analytical instrumentation and industrial systems.

Arrangements of mirrors or prisms used as camera attachments to photograph stereoscopic image pairs with one lens and one exposure are sometimes called &quot;beam splitters&quot;, but that is a misnomer, as ...

In this article, we will answer these questions: what is a beam splitter, what are the common types of beam splitters, and how does a beam splitter work in various devices.

**Diverse Applications:** Beam splitters find their place in various fields, including engineering, robotics, science, security cameras, smart mirrors, fiber optics, filmmaking, laser systems, and more.

**Hyperspectral Imaging:** Although hyperspectral cameras exist as standalone devices, beam splitters can be used in conjunction with multiple cameras and spectral filters to create custom hyperspectral ...

At Blue Ridge Optics, we know that choosing the right beam splitter can make or break your project. Many companies require specific components tailored to their precise needs, making it ...

You can use beam splitters in several other fields, such as engineering, robotics, science, security cameras, smart mirrors, fiber optic, filmmaking, laser systems, and more.

Beamsplitters are optical components used to split incident light at a designated ratio into two separate beams. Additionally, beamsplitters can be used in reverse to combine two different beams into a ...

Aside from the above-mentioned applications, beam splitters are also used in numerous domains such as engineering, robotics, science, security cameras, smart mirrors, fiber optics,...

For example, beam splitters are required for various interferometers, autocorrelators, photo cameras, projectors and laser systems. The wide range of applications implies widely varying requirements, ...
