

Common types of colds include rhinovirus, coronaviruses, and human parainfluenza virus. Tests can determine the cause of your cold, but it's usually not necessary. Covering coughs ...

A cold and the flu (influenza) are two different illnesses. A cold is relatively harmless and usually clears up by itself, although sometimes it may lead to a secondary infection, such as an ear infection.

Common cold symptoms tend to affect the upper airways, like the nose, head, and throat. Learn how symptoms progress with a viral cold.

Hot and cold aisles in the data center are part of an energy-efficient layout for server racks and other computing equipment. The goal of a hot/cold aisle configuration is to manage airflow ...

Hot and cold aisles in the data center are part of an energy-efficient ...

In adults or children, a common cold that lasts a while can lead to swelling and pain in the sinuses. These are air-filled spaces in the skull above the eyes and around the nose.

Complete cold aisle containment guide for data centers. Learn CAC benefits, implementation steps, and achieve 35% cooling cost reduction.

Designed with less moving parts for increased durability and versatility, this simple, streamlined design has a low profile with no threshold and pneumatic soft close feature. Two standard opening widths ...

Our team can perform an assessment that recommends the containment option best suited to increase cooling capability, enable lower air handler fan speeds to save significant cooling costs, and improve ...

Sneezing, scratchy throat, runny nose -- everyone knows the first signs of a cold, probably the most common illness known. These symptoms are usually caused by a viral infection.

In this guide, we'll break down how hot aisle and cold aisle configurations work, what containment systems do, and why airflow management is critical in today's high-density data centers.

Three highly effective airflow management strategies, hot aisle/cold aisle layout, containment, and in-rack/in-row cooling are covered in detail on other pages on this website.

Coronaviruses are a group of viruses known for causing the common cold. They have a halo or crown-like (corona) appearance when viewed under an electron microscope. The common cold is an ...

strategies orient the IT racks in what is called a hot aisle/cold aisle layout. Cold aisles are formed by the space between the front faces of two rows of IT equipment racks

Cold aisle containment (CAC) ensures that the IT equipment is being cooled within the manufacturer's specifications. Hot spots, like a weak link in a chain, impact the ability to achieve the efficient ...

The common cold is an upper respiratory tract infection caused by many different viruses. The common cold is transmitted by virus-infected airborne droplets or by direct contact with infected secretions. ...
