

Compatible DML low-power optical modules from Nordic suppliers

Choosing low-power optical modules today is one of the simplest, lowest-risk ways to reduce OPEX and improve sustainability without changing architecture or vendor lock-ins.

For our optical component and module customers, this highly differentiated set of products provides a unique roadmap that improves performance and reliability, while simplifying design, lowering costs ...

Each product in our wide range of detectors, laser diodes, laser modules, optics, fiber optics, and more is worth every Crown (SEK). Our customized solutions cover all conceivable areas of application: ...

From low data rates to 800GB, we have compatible, energy-efficient modules tested with global standards. Get the quality you need for any application.

Blue Sky Research's CHROMALASE II design incorporates standardized control and alarm firmware, protection circuitry and low-noise operation into a compact, stand-alone assembly. Everything you ...

All LPO modules undergo independent validation in EU laboratories for power, signal integrity, and interoperability. A downloadable test summary will be available upon final verification.

These modules/modems are available with the necessary external circuitry and are either partly or fully qualified (with/without integrated antenna) towards relevant wireless standards.

Industry-leading linear drivers for 100G to 1.6T PAM4 and Coherent-based optical modules provide cutting-edge performance, quality and reliability to enable high-speed data transmission for AI, cloud ...

Search for and compare optical components from manufacturers around the world, or for custom jobs we'll match you with an industry expert service provider.

The nRF9151 is a low power cellular IoT System-in-Package (SiP) with integrated LTE-M, NB-IoT, GNSS and DECT NR+ wireless modem. For evaluation and development purposes, Nordic ...
