

Construction of the long-span bridge in Ireland

When it was constructed in 1826, the bridge across the Menai Strait, between the north Wales mainland and the island of Anglesey, was a vision of the future. Suspended between the ...

The incredible reason why there's no 27-mile bridge connecting ...

The Irish Sea Bridge is a hypothetical infrastructure project that would stretch across the Irish Sea and link Northern Ireland to Great Britain.

Crossing the Irish Sea could be achieved using a combination bridge and tunnel construction. This could include an immersed tube section, whereby the tunnel sections are built on land and floated into ...

The Irish Sea Bridge, sometimes called the Celtic Crossing by the media, is a hypothetical rail and road bridge that would span the Irish Sea and connect the island of Ireland to the island of Great Britain. It is one of a number of such proposed fixed sea links across Ireland and Britain. The bridge's length would depend upon the route taken; one such route, known as the Galloway route, would cross the North Channel, ...

While the study concludes that "cutting-edge, twenty-first century civil engineering technology would make it possible to construct either a bridge or a ...
