

Customization Process for Upgraded Data Center Interconnect Optical Circulator

To support dynamic data center workloads efficiently, however, it is critical to switch between wavelengths at nanosecond (ns) timescales. Here we demonstrate ultrafast OCS based on ...

Learn the best practices for designing and deploying extreme-density data center interconnects in data center campuses.

Learn how optical interconnects power AI-driven data centers with massive bandwidth, ultra-low latency, and sustainable scalability.

Deliver scalable optical data center interconnect and data center connectivity to meet growing AI demands with performance, efficiency, and security.

Optical interconnects are now a core building block for high-bandwidth, low-latency connectivity in modern data centers. As network speeds scale and cabling runs become denser, ...

We introduced an optical switched datacenter network interconnection layer (DCNI) to connect the blocks. This layer uses MEMS-based Optical Circuit Switches (OCS) to enable fast, reliable and ...

This opens the window for development of new products or sub-systems dedicated to monitoring of incoming wavelengths, with the capacity to measure incoming optical power, verifying the SLA and ...

We first describe hyperscale data center network architectures and requirements, as well as the differences between carrier's optical transport networks and DCI optical networks, with the main ...

The solution simplifies transport between data centers by replacing stand-alone optical transponders with the Cisco ® portfolio of standardized coherent pluggable modules, which can be ...

In this paper, we present the design and implementation of Apollo, which we believe is the first large-scale deployment of optical circuit switching for datacenter networking.

Turning to the data center, we review the requirements for scaling and improved resource utilization and the need for high-bandwidth intradata center links and the move toward disaggregation.
