

# Different network segments connected to the same switch

When different servers or storage devices are in different network segments, the switch connects these segments to realize the rapid exchange of data between servers or storage devices, ...

This guide explores three methods (Layer 3 devices/dual-NIC hosts/firewalls) to connect 192.168.1.0/24 and 192.168.2.0/24 segments, with Huawei switch and Linux examples, addressing ...

To sum up, Layer 2 switches need to be paired with routers to realize the purpose of interconnection between different network segments, while Layer ...

By following this comprehensive guide, you can effectively learn how to configure a switch for network segmentation, enhancing your network's security, performance, and manageability.

This capability allows the network to be arranged with low-traffic nodes sharing the same segments, while network and database servers and other high-bandwidth devices (optical drives, for example) ...

Ethernet is supposed to communicate within Ethernet segments, so that will of course work. As you indicate that you want hosts with IP addresses to communicate, that is NOT via ...

In addition to configuring an IP address for a VLANIF interface, you need to configure a static route or a dynamic routing protocol when PCs on different network segments across several switches need to ...

Learn how to choose the right network switches for your enterprise. Explore Layer 2 and Layer 3 capabilities to optimize segmentation and enhance network efficiency.

The Switch is a network device that is used to segment the networks into different subnetworks called subnets or LAN segments. It is responsible for filtering and forwarding the ...

Learn how to choose the right network switches for your enterprise. Explore Layer 2 and Layer 3 capabilities to optimize segmentation and enhance ...

To sum up, Layer 2 switches need to be paired with routers to realize the purpose of interconnection between different network segments, while Layer 3 switches do not need to build...

You will always get better protection with different physical switches but at the very least you want a L2 switch (or L3 but no routing) to connect the ISP to the outside of your firewall in a ...
