

Flame-retardant standard weight corrugated flexible conduit is used where high ...

Flame-retardant standard weight corrugated flexible conduit is used where high fire-protection is required, including railway vehicles, tunnels and underground stations as well as public buildings.

Lifeline cables are designed and certified to the highest international standards, meeting or exceeding UL 2196 and ULC-S139 requirements for one- and two-hour fire resistance.

AFL's indoor/outdoor flame-retardant Wrapping Tube Cable with SpiderWeb Ribbon[®] (SWR) offers high fiber density, flexibility, and easy installation. Engineered for high-performance networks in space ...

Corning indoor fiber optic cables are used in spaces that require a flame retardant jacket. These cables may be deployed in duct (conduit) or cable tray.

DuraOpto Fire Retardant provides a protective pathway for fibre optic cables in communication networks where fire safety is a key concern. It is designed for end-to-end fibre jetting in indoor FTTH, data ...

The first UL flame listed optical cable designed for indoor/outdoor use in vital communication and emergency systems that need to be operational during fire. The cable has a patented design that ...

Plenum-rated innerduct features a higher flame rating to prevent flame propagation, while also limiting smoke/toxic fume emissions during a fiber. It is the required rating for any innerduct in ...

Lifeline cables are flame-retardant and possess low smoke and low toxicity properties, aligning with the industry's most stringent specifications. These fire-resistive cable systems are specifically designed ...

CPR fire-resistant optical cables with Euroclass Dca, Cca, and B2ca classifications. Safety and performance for critical applications.

Lifeline[®] QFCI is the first UL flame listed optical cable designed for indoor/outdoor use in vital communication and emergency systems that need to be operational during fire. The cable has a ...
