

How much space should be left on both sides of the network cabinet

Side clearance: There should be a minimum of 30 inches of clearance from the sides of all electrical equipment, but in no case less than the width of the equipment itself. This is referred to as the side-to ...

If the cabinets have side panels and you believe that at some time you might need to remove them, then position the cabinets with at least 2 feet (0.6 m) of space on either side.

These distances indicate space that must be clear to the floor. The chart above illustrates the varying requirements for the depth of the working space in the electrical room based on existing conditions.

A minimum of 2.5 inches (6.4 cm) of clear space should exist between the side edge of the chassis and the side wall of the cabinet. No sizeable flow obstructions should be immediately in ...

We also require 24 inches of clear space behind the cabinet for technician access and waste heat management. One side of the cabinet may be up against a wall, but we want either 24 ...

There should be a minimum of 2.5 in. (6.4 cm) of clear space between the side edge of the chassis and the side wall of the cabinet. No sizable flow obstructions should be immediately in the way of the ...

Also very important is sealing the open space between the rails and the sides of cabinets/racks. In some racks this space is sealed by design, however in many it is left open.

A visual guide to NEC 110.26 working space requirements. Understand the required depth, width, and height clearances for panels, switchgear, and transformers.

All cabinets **must** have vertical cable management space on both sides of the rack proper, with at least 1 front/back horizontal "thrus" for every 15U, capable of at least 20 square inches of "thru" cabling ...

The width of the working space can be measured from left-to-right, from right-to-left, or simply centered on the equipment. It can overlap the working space for other electrical equipment.
