

The AU-D12 is a digital audio splitter with one Optical (Toslink) input to two Optical (Toslink) outputs, which maintains a reliable and loss-less audio signal transmission.

If you follow these steps and tips, you can install your splitter the right way and keep your fiber network strong. This helps you give good service to all users in passive optical networks.

When setting up a splitter, simply connect your source device to the splitter using a TOSLINK cable and use additional TOSLINK cables to connect each output to the desired audio ...

Download user manual for optical audio splitter Split TS12. This user manual describes features and usage of the device.

Optical Out: Connect your audio amplifier or powered speakers to these outputs using an optical (Toslink) digital audio cable (not supplied). Back DC 5V: Connect the power adapter (included) and ...

In this guide, we'll explain how to safely connect a splitter to another splitter, covering both fiber optic and coaxial setups.

Digital Optical Audio Splitter is designed for the audio signal distribution from one digital optical input to two outputs, using TOSLink (Optical Fiber) cables. The Optical Fiber cables connected to both ends ...

In the realm of optical communication networks, the optical splitter serves a vital role in dividing and distributing optical signals efficiently. Understanding how to properly place and use an ...

In this video, we'll introduce you to passive optical splitters, a simple yet powerful tool for scalable and cost-effective fiber network expansion.

1 TOSLink(Optical Fiber) Input Port: Connect the TOSLink input port to the TOSLink output port of audio equipment such as audio amplifier,AV receiver or DVD player.
