

Low-noise installation solution for Icelandic communication corrugated duct

Insertion loss refers to reducing sound by adding insulation to a duct system reducing sound transmitted through the duct.

Acoustical Solutions creates spaces that are optimized for sound. Whether you are looking to soundproof a space for privacy or reduce noise for speech clarity--we deliver.

High-Density Polyethylene (HDPE) Telecommunication Corrugated Ducts are engineered to protect and manage telecommunication cables in underground installations. Their corrugated exterior provides ...

We are pleased to share the details of our latest silent booth project for a customer in Iceland who makes it a top priority to provide a comfortable, noise-free meeting space for their staff.

Our HVAC duct lagging & pipe acoustics control products are designed to offer significant reduction of radiated noise from HVAC duct casings. The lagging can be applied to rectangular or round duct and ...

This document provides information on Polyethylene Corrugated Ducts (COD) produced by NEPROPLAST for fiber optic and electrical cabling installations. COD is a multiple channel duct ...

Silicone Sub Duct has 80% reduction of coefficient of friction than non-silicone coated internal ducts, and provides complete cable protection before, during and after installation.

These systems reduce the installation time for the yard and more importantly reduces costs. A modular system leaves a smooth finish with no external profiles, no visible screws/rivets. It is appreciated just ...

The Corrugated panels offer considerable sound absorption capabilities, effectively reducing reverberation and echo. This means clearer communication, improved concentration, and a more ...

Soundown's QuietLag acoustic pipe and duct wrap material consists of a fiberglass decoupling layer and TuffMass barrier with reinforced facing. By decoupling the barrier from the pipe or duct, this product ...
