

I need to build a basic attenuator and wonder if someone could help. I have updated my post to try and make it clearer what my problem is: One end of circuit is a WiFi headset unit.

Complete guide to optical attenuators: fixed, stepwise & continuous types. Learn gap-loss, absorptive & reflective principles plus attenuation calculations.

A cheap and simple RF attenuator, with 10dB steps from 0 to -40dB, and integrated dummy antenna, for use when aligning old AM radios.

The L-Pad Bypass Switching Treble Switching Sourcing The Parts Prepping The Enclosure Verdict Parts List and Suppliers There are myriad ways of attenuating an amplifier signal, but the vast majority of DIY attenuators are based on a straightforward circuit called an L-Pad. This method employs extra resistors to dissipate electrical energy as heat. In simple terms, amplifiers and speakers must be matched, so if your amp's output is labelled 8 ohms, it should be conn... This DIY project describes a high precision 15 to 30 MHz stepped attenuator with each attenuator section adjustable to ± .01 dB accuracy or better. An inexpensive eBay Tronson attenuator (figure 1) ...

However, attenuators appear to be the exception, presumably because the ham reliance on dump-loads means there is no market. So here is a simple project to put together an attenuator that reduces ...

It's one of the things that make different preamps and microphones sound different. The point here is that you can minimize the change in coloration caused by inserting a pad by paying ...

In this project, we will go over how to build a very simple attenuator circuit using nothing but a potentiometer.

An optical attenuator is a passive device that reduces optical power in a controlled way without changing the

signal format. In fiber systems, attenuation is specified in dB (a ratio), while ...

The problem can be solved using an RCA (in-line) attenuator, but since a new one can be quite expensive, around 30-40 EUR or even more, so I decided to make one by myself.

A detailed step-by-step instructional guide on how to assemble your own guitar amplifier attenuator for under £40.
