Prysmian offers a wide range of closures and joints to provide safe and efficient connection and storage of optical fibres in the outside plant.

Explore our versatile fiber joint closures, alternatively known as splice closures, designed to seamlessly extend or distribute fiber to the next operational point.

Cables are also spliced to split a cable into two or more cables to provide intermediate drops or splits. Splicing is generally done with fusion splicing, a highly automated process.

These are the outdoor fiber optic cables you see strung along telephone poles (aerial), installed inside an underground duct, or even buried directly below ground.

The OSP Distribution 8 Port Enclosure is uniquely designed to accept a wide range of distribution and drop cables to accommodate any FTTx application. This "plug-n-play" style enclosure is specifically ...
