

Easily add fault and event recording capability to electromechanical relays. Using our individually-calibrated split-core CTs, you can install our 70 series disturbance recorders without taking an ...

Protective relays and devices have been developed over 100 years ago to provide "lastline" of defense for the electrical systems. They are intended to quickly identify a fault and isolate it so the balance of ...

Find your perfect match! A powerful fault recorder with integrated synchrophasor (PMU) and power quality measurement compliant with IEEE C37.118 and IEC 61000-4-30 standards.

The evolution of protection relays from electromechanical relays to static relays to modern numerical protection relays with communication capabilities have improved the operation and control of power ...

This existing equipment can be integrated into a DDFR fault recording system by connecting them to Universal Relay C60 or C30 power system controllers that will perform the necessary Sequence of ...

Eaton's protective relays provide you with unique microprocessor-based devices that eliminate unnecessary trips, isolate faults, protect motors and breakers, and provide system information to help ...

The experimental results show that this method can effectively analyze the operation characteristics of power system relay protection, and can accurately check whether the relay ...

The Reason RPV311 digital recorder is a powerful electrical system monitoring, recording and analysis device.

ERLPhase Power Technologies is a ISO 9001:2015 manufacturer of digital protection relays and power system recorders with a global customer base.

The disturbance recorder module type SPCR 8C27 is a high-capacity, fully digital data recording module, which is used together with protection relays and terminals of the SPACOM product range.
