

Remote Control Float Valve Distribution Box

DPX100 hydraulic valve with 4 float (swimming) sections, 12V solenoids, and control box with 4 switches. Ideal for precise multi-function control.

This float control valve is a hydraulically driven automatic control valve used to control the filling and liquid level of a reservoir or water tank. The filling is controlled by an adjustable horizontal float.

Featuring remote control functionality, the valve easily integrates into automated systems, providing precise control and optimal water management. Additionally, each valve comes with a matching ...

Automatic Control Valve (ACV) ZW204 comes with Non-Modulating Float Valve controls fluid level in a tank by opening fully at a low set point and closing tightly at a high set point.

The remote float ball control valve is widely used for liquid level control in water towers, buildings, waterworks, and other water supply pipeline systems. In brief, we can describe it in three ...

Float valves are automatic control valves for use in modulating or on-off service. The float control is either valve-mounted or operated remotely. Feature combinations include pressure sustaining and ...

YFL remote float control valves can control the water supply to the water storage tank automatically and remotely with P100 float pilot. YFL remote float control ...

YFL remote float control valves can control the water supply to the water storage tank automatically and remotely with P100 float pilot. YFL remote float control valves working principles: When the water ...

It features reliable sealing with no leakage, flexible float action, and simple maintenance, making it ideal for automatic water supply systems in high-rise buildings, municipal projects, and industrial applications.

It is a hydraulically operated valve with multiple functions. Remote float control valve can effectively control the liquid level of the water tower or water tank, and is suitable for connecting or cutting off ...

Control hydraulic valves wirelessly with the LGW-W16RX distribution box. Features 20-way remote control and 32-way PLC signal compatibility. Ideal for industrial automation applications.

Remote Control Float Valve Distribution Box
