

High energy costs and accelerated energy consumption has forced data center managers to implement strategies to achieve separation between the hot and cold air in the data center.

A cabinet supported cold aisle containment solution consists of aisle-end doors and roof system to prevent the cold air in aisle mixing with the hot air. With the help of sealing accessories, cooling ...

Standard sizes fit common aisle widths and heights while custom widths and heights can be easily accommodated. Can be easily assembled directly out-of-the-box with a single hand tool; attaches ...

The components are organized into modular kits and come with assembly hardware for easy step-by-step installation. Depending on your hot-aisle/cool-aisle needs, you can select from an assortment of ...

Explore sliding and swinging options for cabinet-to-cabinet and cabinet-to-wall applications. Our easy-to-install doors are offered up to 102" high and available in single and dual openings.

Explore cut-to-size twinwall polycarbonate sheets for hot and cold aisle containment in data centers. Lightweight, impact-resistant, and flame-rated materials that improve cooling efficiency and reduce ...

extension of the hot aisle/cold aisle concept of data center design. Hot aisle/cold aisle configuration is a best practice solution that separates hot and cold air streams. This method raises the temperature of ...

Cool Shield Aisle containment solutions reduces server row ...

Our modular Cold Aisle Containment System is engineered to tackle the toughest challenges facing modern facilities, from rising cabinet densities and shrinking budgets to airflow inefficiencies and ...

Cool Shield Aisle containment solutions reduces server row temperatures in active data centers. Learn more about the benefits of hot and cold containment.

Cold Aisle Containment for rack cabinets with single or double sliding doors and sliding roof frame units fabricated out of aluminium, with polycarbonate panel material and fire nozzle entry sections.

Ceilings span the gap across the top of cabinets in cold aisle containment. They keep cold and hot air from mixing and are available in several styles to best suit your application.
