

Sx-3300 Microcomputer Relay Protection Instrument

Equipped with advanced DSP technology, a high-fidelity linear amplifier, and multiple digital interfaces, it ensures reliable, efficient, and automated protection system calibration. Compact and portable, it's ...

For testing high-voltage microcomputer protection devices, it is recommended to use a microcomputer relay protection tester capable of simultaneously outputting three-phase voltage and three-phase ...

Properly working protection devices help to maintain the safety of the system and to safeguard assets from damage. SXJB-3300 Protection Relay Tester is the essential test tool for relay protection ...

At the same time GDJB-PC Microcomputer Controlled Protection ...

The tester is capable of testing various traditional relays and relay protection devices as well as modern microcomputer protection devices is particularly convenient for testing transformer differential ...

Three phase relay protection microcomputer test system Test-330 is a three phase current output and five phase voltage output relay tester with embedded host machine equipped with Complex ...

Eaton's protective relays provide you with unique microprocessor-based devices that eliminate unnecessary trips, isolate faults, protect motors and breakers, and provide system information to help ...

Not only test the traditional relays and protectors, but also test the modern micro computer replays, special for transformer differential protection and transfer equipments2.

Reliably working protection relays are key in modern energy systems. Read on to learn about best practices, challenges, and trends in protection testing.

At the same time GDJB-PC Microcomputer Controlled Protection Relay Test Set Three-Phase Relay Tester could be considered as a universal three phase AC/DC voltage source or current source.

This model relay test equipment can independently finish device test in professional fields of microcomputer protection, relay protection, excitation, metering, fault recording, etc.
