

The pigtail cable is not working after being unplugged and plugged back in

After 4 hours of attempting to charge at EVGo, ChargePoint and Electrify America, and seeking phone help from each company and Lucid, I was still getting a cable lock error and ...

I put on a spare curled pigtail from my side box and it worked until I replaced with a new 15-ft straight pigtail and now that one isn't working after a ...

A faulty pigtail can lead to anything from intermittent malfunctions to complete system failure, even posing a significant safety hazard. This is why understanding how to effectively test a ...

The "pigtail" connector I'm referring to is the one that is unplugged and has a purple wire and a gray wire running from it. All I can tell you is that it's located close to the Air Filter and there ...

We have fully replaced the cable and plug to the junction box, cleaned both the plug and receptacle, and checked fuses on both the truck and the RV with none of the fuses indicating an issue.

Ribbon cables like that often appear to "fix themselves" after being unplugged and reconnected. That's from the scratching action creating new shiny areas of contact.

The wires I exposed to connect the new pigtail seemed very oily/greasy. I'm wondering if the oil seeped from a bad icp through the pigtail, ruining it, and ran into the wires and is causing ...

Don't let a melted headlight connector leave you in the dark. Find out how to replace the connector with a new headlight pigtail.

I put on a spare curled pigtail from my side box and it worked until I replaced with a new 15-ft straight pigtail and now that one isn't working after a couple of days.

A common issue with semi-truck trailer lights is power at the pigtail outlet but no power once the pigtail is plugged in.

After unplugging the pigtail, the situation remained unchanged: the left signal works when the lights are on, while the right one freezes, and the turn signal light on the right stays lit but does not flash.
