

Protection relay tester which offers all the characteristics and functions needed for protective relay testing, in a manual or automatic mode, designed for maximum efficiency, flexibility and simplicity, ...

Select from a number of protective relay tester models that feature varying power levels and complexity. Choose the best solution according to your testing and budgetary requirements.

This is a test to check the maximum length of time that the protection relay can withstand an interruption in the auxiliary supply without de-energizing, e.g. switching off, and that when this time is surpassed ...

Our relay protection tester offers comprehensive testing for both optical digital and traditional protective devices. It's ideal for power plants, substations, equipment manufacturers, and institutions needing ...

Professional protection relay testing calculator implementing IEEE C37.90 and NETA ATS standards. Calculate pickup values, timing curves, coordination time intervals (CTI), and test injection ...

It can not only test various traditional relays and protection devices, but also test various modern microcomputer protection, especially for transformer differential power protection and standby ...

Verify that your protection relays operate correctly when faults occur. Megger's smart relay testing solutions and expert support help you validate protection performance, improve system ...

11.The software with self-calibrating function, which avoid to calibrate accuracy by adjusting relays after open the case, greatly improve the stability of the accuracy.

Through online monitoring and testing, the operational status of the power system and relay protection devices can be monitored in real-time, ensuring their reliability and accuracy in actual operation.

How to test the operating time with a relay protection tester? Relay protection devices, as key safety protection components in power systems, directly affect the safety and stability of power grid ...
